

## Leaflet

**for identification of the packing / the inlaid paper / accompanying papers  
for DINplus non-woody Pellets according to DIN EN ISO 17225-6 (A & B) .**

The packaging and/or the accompanying papers (with unpacked consignments) must be indicated by the following data durably and in the language of the sales market well readably:

- 1) Name or registered trademark with contact option of the manufacturer or the supplier/distributor
- 2) Designation of the product with indication of the diameter (in mm) e. g. non-woody pellets, class A – diameter 6 mm
- 3) Nominal weight and/or mass of the packaging content
- 4) Country of origin of the raw material used or exact origin according to classification 2.2.2 & 3.2.2 as per Table 2 in the Annex of certification program
- 5) Designation of the raw material with indication of the 4-digit classification number from Annex of certification program (at least 3-digits if 4 digits not available), e.g. from 2.1.2.3 Seeds of grasses.
- 6) Any mixing ratios, see 3.1, certification program
- 7) Any impurities, see raw 3.2, certification program
- 8) Notice, that during transport and storage the non-woody pellets are to be protected from moisture.
- 9) The non-woody pellets shall only be combusted in heat-producing appliances that are suitable and permissible for this type of fuel (cf. operating instructions for the heat-producing appliance).
- 10) Note that non-woody pellets should only be stored in well-ventilated storage areas suitable for this when bulk pellets are delivered to end-customers.
- 11) For clear identification of the delivery, every product or its packaging/insert/accompanying documents must be labelled with the year of manufacture and, in the case of several monitored production sites, the production site.

This can take the form of an identification code and/or a serial number providing information on the year of manufacture and the production site (the encoding must be declared to DIN CERTCO). For reasons of the traceability the marking with the actual date is recommended.

- 12) Quality mark “DINplus” (The mark may only be used in his original form. The mark may only be modified proportionally in terms of its size. Deviating from the colour design in the template, marks may be depicted in mono colouring.) and with corresponding registration number (minimal height of 2 mm for the readability and traceability following successful certification, see also clause 5.5 of the currently valid certification scheme for wood pellets).
